

LINJING RAO

New York, NY | 315-928-0328 | Linjing.rao@gmail.com | [LinkedIn](#) | [GitHub](#)

City operations and NYC region owner at Citymapper (Via Transportation) owning user experience and regional routing performance. Experienced in shipping intermodal booking integrations connecting on demand rideshare with public transit, led co branding initiatives with city partners, and drove operational improvements backed by wait time and sentiment analysis. Background in urban planning and transit data, with expertise in demand coverage monitoring, unplanned disruption management, and multi city go live execution.

EDUCATION

Cornell University – Cornell Tech, New York, NY

Aug 2022 – May 2024

Master of Applied Information Science | Urban Tech Concentration

GPA: 3.9 | Admitted with Merit Scholarship

Relevant Coursework: Urban Mobility Systems, Product Management, Data Visualization, Machine Learning, Operations Strategy

Syracuse University, Syracuse, NY

Aug 2017 – May 2022

Bachelor of Architecture

Minor in Economics | Graduated with Magna Cum Laude Honors

SKILLS

Transit Operations: Transportation planning, ridership demand forecasting, live vehicle traffic visualization, intermodal and multimodal routing integration, geospatial analysis, community impact assessment

Data & Tools: SQL (AWS Athena), Python, Tableau, Grafana, KPI monitoring, JIRA, Airtable, ArcGIS, Figma

EXPERIENCE

Via – Citymapper, City Operations Data Analyst, New York, NY

Oct 2024 – Present

- NYC region owner, responsible for pre launch validation of service area routing QA, and walkgraph resolution; managed go live coordination with transit agency partners including NJ Transit and Jersey City.
- Completed 50+ region expansions and public transit integration, shipped the **native Via microtransit booking integration** on Citymapper for multiple north east regions, enabling seamless **intermodal** connections between on-demand rideshare and public transit.
- Led **geospatial analysis** to audit and correct 1,000+ bus stop locations by cross referencing crowdsourced user data against **OpenStreetMap**, iterating deduplication logic to resolve conflicting locations and improve bus data accuracy.
- Defined operational strategy for city scale events and **community integration**, setup **co-branding** and **partnership marketing materials** with design and city partners to strengthen local market presence; configured **geofenced service areas** for NYC parades, and major activations; coordinated with Jersey City PATH trains on major station suspension alerts and replacement routing.
- Built an **agentic AI pipeline** to automate NYC MTA **planned disruption processing and service routing curation**, eliminated 2.5 hours of weekly manual work and ensured 8M+ daily riders receive accurate routing on the app.

Urban Tech Hub, Strategy & Urban Research Analyst, New York, NY

Sep 2022 – Aug 2023

- Led product development for **Open Zoning**, a multifamily rezoning visualization tool, defined MVP success criteria through **community user interviews**, transformed unstructured zoning code into structured datasets to quantify **regulatory constraints** across neighborhoods, and translated complex policy into actionable insights for city stakeholders.
- Analyzed large-scale geospatial and demographic datasets (zoning layers, population, census indicators) using ArcGIS and Python, translating complex spatial data into insights published in the annual NYC Urban Tech Ecosystem Report.

LWK+Partners, Intern Computational Design,

May 2021 – Jul 2021

- Collaborated with architects and engineers on the Huya HQ Architecture and urban planning project. Developed a parametric design tool using geospatial analysis and 3D modeling that reduced facade modeling from days to minutes.
